

Mobility and Rehabilitation

350kg & 250kg Bariatric Walkers

“A fantastic innovation providing mobility!”

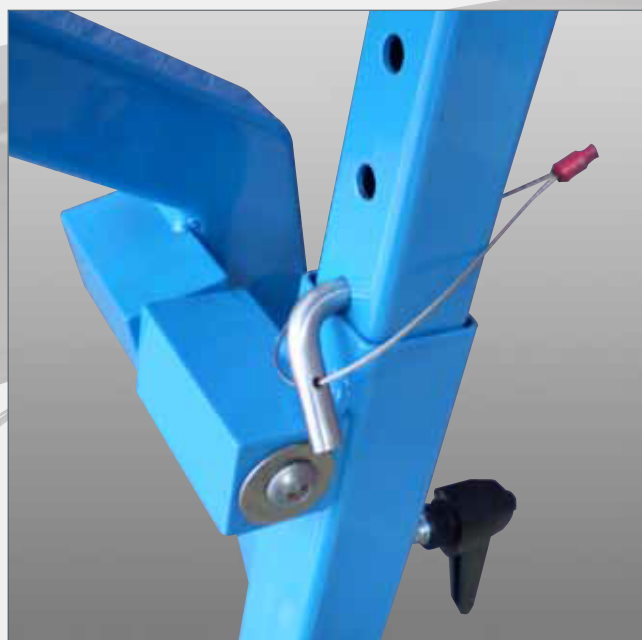

The Nybro Mobiliser Walker is a walking frame designed for the specific needs of Bariatric patients. It has a safe capacity for patients weighing up to 350kg.

The device is intended for use with the assistance of occupational therapists for rehabilitation of bariatric patients that may require physical therapy.

The height and width of elbow supporting armrests are adjustable to suit the ergonomic requirements of the patient.

350kg Bariatric Walker expanded for use.

Adjustable height with locking mechanism.

The device is built from high strength materials and has surface finishes that are easy to keep hygienically clean. When not in use, the device can be folded for compact storage. The vinyl arm rest covers are removable to allow for cleaning or replacement.

The device is fitted with heavy duty swivel casters and two rear casters that are fitted with breaks. The fasteners are specially designed and machined to be fitted with a clean unnoticeable finish, removing the risk of injury to the patient.
