

# To Create is to Live

**Product and Industrial Design Services**

**“Do you have a new idea? Let us help you bring it into reality!”**

## Success Can Be Yours

How do large companies do it? How do individual inventors have success with their idea? What is a project plan? Can rapid prototyping help me? How do I manufacture or produce my product?

The fascinating journey of developing a new product or idea is very much like a game of golf. There are plenty of obstacles in the way to prevent you from hitting that hole-in-one; however, with a little help, the right equipment, a good attitude and the ability to stick at it, success can be yours.

We can help with initial concepts, complete documentation, engineering, manufacturing and if required, design and production of custom packaging.

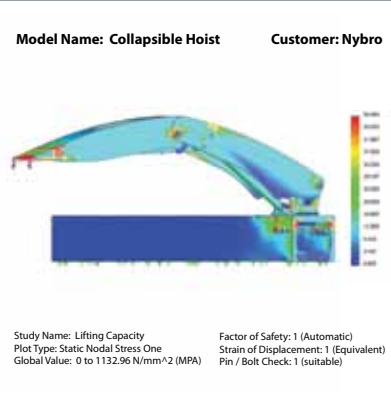

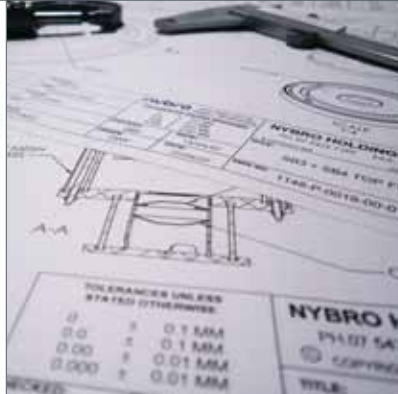

## We Know the Steps to Take

Over the last twenty years the method of developing a new product or designing a complex machine has certainly changed. The end solution is the same; your product on the shelf or your machine or equipment doing the job as it was intended.

Today, with our modern 3D design software, four important steps in the product development journey are now much more refined.

The information produced in these steps is used in every other process to complete the development phase. It can also be used for important marketing material. Starting with a 3D model we can investigate strengths and weaknesses with a simulation study, produce manufacturing drawings, render images for realistic visualisation and much more.

## How to Get Started

For new inventors or even well established businesses, it can be hard to find someone who will listen to your ideas seriously and objectively. This is where we can help.

Either phone us or log on to our website, then book an initial design consultation. The first consultation is like a check-up with a doctor. We will carefully listen to your concept and come up with some options for development and moving forward.

For more information, review our website [www.nybro.com.au](http://www.nybro.com.au) and learn about our services like rapid prototyping, our manufacturing capabilities, our packaging design and other aspects of product development.
