VG2 Mobility Scooter

“What an exciting adventure!”

Whether you're cruising the beach or quietly discovering the natural beauty of a forest track, The Nybro Venture Gold Series 2 seater 4WD Mobility scooter is the ultimate in all aged freedom.

Containing exceptional stability, power and reliability for a smooth ride. Both the front and the rear are stocked with independent adjustable coil spring suspension and electronic limited slip differentials adding to the performance of this vehicle.

Suitable for most off-road and outdoor conditions.

70mm of travel in the front suspension.

This Australian designed and manufactured electric ATV has in-line seats rotating the full 360 degrees for unrestricted access.

Enjoy fishing off the back or waiting for your golfing partner to have their shot. The back seat is removable, enabling interchangeable trays, which will convert into a Ute. Canopies, golf bag, tow bar and general carrying attachments are also available.

Manufacturing the VG2 in our Sunshine Coast facility.

We handle all our sales from our Sunshine Coast manufacturing facility and individually build each product here in our own factory. Nybro ATV's are 100% Australian made, including the electric motors.

This manufacturing process guarantees that we know our product. The way it has been designed also ensures we can adequately service it, regardless of your location.

The VG2 is installed with a self-diagnostic flashing code which helps us determine any problems, thereby allowing us to solve most issues with phone or email support.

The scooter comes equipped with optional seatbelts to assist stability of mobility impaired and disabled explorers. This scooter will fit into your larger carrying vehicles such as utes, vans or motorhomes for people travelling on a greater scale.

Remote chargers are available, enabling independence from 240v power supply. If you desire to travel a greater distance, our hybrid version is available to switch between either (petrol or electric), perfect for a day transport from base camp.

Scooter shown with optional hybrid Trailer & Esky Carrier.

Technical Information

What makes it go
